Master Use Permits – General Responsibilities

Screening Responsibilities: These standards are all required for a complete application and prior to routing for a review, but individually, are not a reason to reject an appointment. The screener must look at all aspects of a project submittal and determine whether the combination of missing items can be added during the appointment time constraints.

“**Project stoppers**” are corrections that require a substantial redesign.

Applicants are responsible for insuring that their submittal meets this checklist and standards prior to intake. The limited time of intake is not intended for applicants to complete their application materials.

LU Screener: Responsible for content and completeness of Land Use Application forms using ArcView to verify zoning designation, overlays, site conditions and characteristics. Screen plans using the “Master Use Permit Screening and Submittal Checklist and Standards” form. Review “Pre-site” inspection notes for Land Use issues and Pre-submittal Conference notes. Review and verify for accuracy PF 15, Land Use Notice, routing and component information. Review and verify PF 17/17 application information and PF 17/19 project description. Verify project description and notice language on Land Use Worksheet. Review and verify corrections identified in the Addressing Records Worksheet.
